

RISAL

CONTRACTING SERVICES

Engineering Assurance. Technical Excellence. Careers Built Right.

CORPORATE PROFILE

Technical Training • Engineering Consultancy • Asset Integrity • Inspection Support • Placement Services

OUR BRAND PROMISE

The convictions that guide every engagement

Engineering Assurance. Technical Excellence. Careers Built.

Where Technical Competence Meets Career Opportunity.

Integrity in Every Inspection. Excellence in Every Engineer.

Building Certified Careers. Safeguarding Critical Assets.

Precision Training. Trusted Inspection. Proven People.

The Bridge Between Technical Talent and Industrial Assurance.

Competence You Can Certify. Integrity You Can Rely On.

Training Engineers. Assuring Assets. Advancing Industry.

From Certification to Career - Engineered for Excellence.

Your Partner in Asset Integrity and Technical Talent.

01 ABOUT US

Company Overview

Who We Are

RISAL Contracting Services is a technical training, engineering consultancy, and asset integrity organisation built to serve the Oil & Gas, Petrochemical, Power, and heavy-process industries. We were established on a conviction: that industrial safety and operational reliability begin with competent people, and competent people are built through rigorous training, structured mentorship, and access to the right career pathways.

RISAL is structured around four integrated pillars - Technical Training, Engineering & Inspection Consultancy, Asset Integrity Services, and Placement & Career Development. This integrated approach enables us to guide candidates from certification to successful careers while providing industries with reliable inspection, engineering, and technical support under one trusted partner.

Our faculty, consultants, and technical assessors bring decades of combined field experience across API, ASME, ASNT, AWS, and ISO frameworks, gained on live refinery turnarounds, offshore platforms, cross-country pipelines, and greenfield EPC projects.

What Sets Us Apart

We do not merely supply resources - we engineer outcomes. Every training batch is benchmarked against international codes; every inspection engagement is delivered against a documented quality plan; every placement candidate is prepared, assessed, and referred with the same discipline we would apply to a client's mechanical integrity programme.

"We build competence, certify it, and deploy it responsibly."

02 MISSION

Our Mission

- ✚ **Deliver internationally benchmarked technical training aligned to API, ASME, ASNT, AWS, and ISO code requirements.**
- ✚ **Provide engineering, inspection, and asset integrity consultancy that measurably reduces client risk and downtime.**
- ✚ **Build a certified, deployable technical workforce for the Oil & Gas, Petrochemical, and Power sectors.**
- ✚ **Guide engineers and technicians through certification, employability, and long-term career progression.**
- ✚ **Uphold uncompromising standards of safety, quality assurance, and ethical business conduct in every engagement.**
- ✚ **Create sustainable value for clients, trainees, employees, and industry partners across every market we serve.**

03 VISION

Our Vision for the Future

To be recognised internationally as a benchmark organisation for technical training, engineering consultancy, and asset integrity services -- trusted by industry for the competence of the people we train and the reliability of the assurance we provide, and trusted by professionals as the pathway to a global technical career.

04 CORE VALUES

Our Guiding Principles

Integrity

We operate with complete transparency -- in the certificates we issue, the inspection findings we report, and the candidates we recommend. Our reputation is our primary asset, and we protect it in every transaction.

Technical Excellence

We benchmark every course, procedure, and deliverable against recognised international codes and standards, refusing to compromise depth of content for speed of delivery.

Safety First

Every training programme, inspection assignment, and site deployment is executed with an uncompromising safety culture, consistent with international HSE expectations.

Professionalism

From our trainers to our inspection engineers to our placement counsellors, every representative of RISAL is held to a single standard of competence, conduct, and accountability.

Continuous Improvement

We invest continuously in updated course content, current code editions, and evolving industry practice, ensuring our trainees and clients are never working from outdated knowledge.

Client-Centric Partnership

We measure our success by client outcomes -- asset uptime, audit readiness, and placement retention -- not by transaction volume.

05 WHY CHOOSE US

A Single Partner for Talent and Assurance

Organisations across the Oil & Gas and process industries face two connected challenges: sourcing genuinely competent technical talent, and maintaining verifiable asset integrity under increasingly strict regulatory scrutiny. RISAL was built to solve both, through one accountable, code-compliant partner.

-  **Integrated Model** -- training, inspection, engineering, and placement under a single quality framework -- accountability beyond the limitations of fragmented service providers.
-  **Code-Aligned Delivery** -- every course and inspection deliverable is mapped to API, ASME, ASNT, AWS and ISO requirements.
-  **Field-Experienced Faculty** -- instructors and consultants with genuine turnaround, offshore, and EPC project exposure.
-  **End-to-End Candidate Journey** -- from certification and CPD hours to resume building, interview preparation, and placement.
-  **Documented Quality System** -- structured QA/QC on every training batch and inspection assignment.
-  **Flexible Engagement Models** -- in-house, online, weekend, and fast-track formats built around client and candidate schedules.
-  **Regional and Global Reach** -- placement network spanning India, the Middle East, and international offshore markets.
-  **Transparent Reporting** -- clear certificates, comprehensive inspection deliverables, and performance-based placement metrics -- consistency, and trust

06 OUR SERVICES

Integrated Engineering Solutions

RISAL Contracting Services operates across four integrated service lines. Each is delivered by a dedicated technical team, governed by documented procedures, and benchmarked against the codes and standards our clients are audited against.

Engineering Consultancy

Our engineering consultancy team supports operators and EPC contractors through the full asset lifecycle -- from design review to operational integrity -- providing independent, code-compliant technical judgement when it matters most.

Inspection Engineering

We provide inspection engineering support that goes beyond field data collection -- interpreting results against code requirements and translating findings into actionable integrity decisions.

Fitness For Service (FFS)

When inspection reveals damage or deviation from design, our FFS engineers apply API 579-1/ASME FFS-1 methodology to determine whether equipment can continue safe operation, and for how long.

Corrosion Management

Our corrosion specialists identify active damage mechanisms and design monitoring and mitigation strategies that extend asset life and prevent loss-of-containment events.

Shutdown Inspection

We deploy qualified inspection teams for planned shutdowns, ensuring maximum inspection coverage within compressed shutdown windows without compromising code compliance.

Turnaround Support

For major turnarounds, RISAL supplements client and EPC inspection teams with surge manpower, technical supervision, and QA/QC oversight, scaled to the size of the event.

Third Party Inspection (TPI)

As an independent third-party inspection provider, we deliver unbiased verification of equipment, materials, and workmanship against contractual and code requirements.

QA/QC Consultancy

We help contractors and operators build project-specific quality plans and QA/QC systems that satisfy client and certifying-body audits, from ITP development to final documentation dossiers.

Technical Manpower Supply

Where clients need certified individuals rather than a consultancy engagement, we supply pre-vetted, code-certified technical personnel across inspection, QA/QC, and engineering disciplines.

Placement Assistance

Our placement division connects certified, job-ready candidates with employers across India, the Middle East, and offshore markets, backed by a structured preparation programme.

Career Development

We work with candidates on the long-term trajectory of their technical career, not just their next job -- mapping certification, experience, and specialisation choices to career outcomes.

Interview Preparation

Our mock interview programme is conducted by professionals with genuine industry hiring experience, replicating the technical and behavioural questions candidates will actually face.

Resume Building

We professionally structure each candidate's resume to highlight certification, code exposure, and project experience in the format international recruiters expect.

Job Search Profile Optimisation

We help candidates build a professional online presence that recruiters and hiring managers can find and trust, aligned with their resume and certifications.

API Application Support

We assist candidates through the API certification application process, ensuring documentation, experience records, and eligibility criteria are correctly compiled before submission.

API Renewal Support

We track certification expiry and manage the renewal process on behalf of individuals and corporate clients, avoiding costly lapses in inspector certification.

CSWIP Renewal Guidance

Our team supports welding inspectors through CSWIP recertification, including refresher content and documentation preparation.

NDT Renewal Guidance

We support NDT technicians through ASNT and PCN recertification requirements, including vision testing coordination and experience log verification.

CPD Hours Programmes

We design structured Continuing Professional Development programmes that help certified professionals accumulate and document the CPD hours required to maintain their credentials.

Engineering Assistance

For clients needing short-term technical support without a full consultancy engagement, we provide on-demand engineering assistance across mechanical and piping disciplines.

Project Support

We embed technical resources within client project teams for defined durations, providing inspection, engineering, or QA/QC capacity precisely when projects need it.

07 TRAINING PROGRAMS

Professional Development Programmes

The RISAL Technical Training Institute delivers internationally benchmarked programmes across inspection, NDT, welding, QA/QC, and engineering software -- designed for fresh engineering graduates building a technical career and experienced professionals pursuing certification or recertification.

API Courses

Course	Focus Area
API 510	Pressure Vessel Inspector Certification
API 570	Piping Inspector Certification
API 653	Aboveground Storage Tank Inspector Certification
API 580	Risk-Based Inspection (RBI) Certification
API 571	Damage Mechanisms Affecting Fixed Equipment
API RP 577	Welding Inspection and Metallurgy
ASME PCC-2 Awareness	Repair of Pressure Equipment and Piping

NDT Courses (ASNT SNT-TC-1A Aligned)

Course	Method
VT Level II	Visual Testing
PT Level II	Liquid Penetrant Testing
MT Level II	Magnetic Particle Testing
UT Level II	Ultrasonic Testing
RT Level II	Radiographic Testing
ET	Eddy Current Testing
PAUT	Phased Array Ultrasonic Testing
TOFD	Time-of-Flight Diffraction
IRIS	Internal Rotary Inspection System
RFET	Remote Field Eddy Current Testing
MFL	Magnetic Flux Leakage Testing

Courses Related Supports

Course	Description
CSWIP Recertification Guidance	Welding Inspector Certification.
AWS Recertification Guidance	Certified Welding Inspector (CWI) Preparation
BGAS Recertification Guidance	Painting & Coating Inspector Certification
WPS Review	Welding Procedure Specification Development
PQR Review	Procedure Qualification Record Development
Welder Qualification Review	Welder Performance Qualification Testing
Civil Structural Inspection Training	Civil & Structural Quality Control

**Piping Codes
and
Standards**

08 INSPECTION SERVICES

Asset Inspection Solutions

Our inspection engineers deliver code-compliant, field-verified inspection across the full range of static equipment, Piping and tanks backed by structured reporting and integrity follow-through.

- ✚ Pressure Vessel Inspection -- internal, external, and in-service per API 510
- ✚ Piping Inspection -- Inspection per API 570
- ✚ Storage Tank Inspection -- Inspection per API 653
- ✚ Heat Exchanger Inspection.
- ✚ Boiler Inspection.
- ✚ Fired Heater Inspection.
- ✚ Pipeline Inspection -- in-line inspection support and direct assessment
- ✚ Structural Inspection -- steel structure condition and corrosion assessment
- ✚ Corrosion Assessment.
- ✚ Risk-Based Inspection (RBI) -- per API 580/581 methodology
- ✚ Fitness For Service (FFS) -- per API 579-1/ASME FFS-1
- ✚ Failure Investigation -- root-cause analysis of equipment failures
- ✚ Remaining Life Assessment -- corrosion-rate based service-life calculation
- ✚ Shutdown Inspection -- Full-scope inspection during planned outages
- ✚ Turnaround Inspection -- surge inspection resourcing for major events

09 NDT SERVICES

Advanced NDT Solutions

RISAL's NDT Division delivers end-to-end NDT solutions through certified personnel, NDT certification programmes, and modern inspection equipment support for conventional and advanced testing requirements.

- ✦ **Ultrasonic Testing (UT)** -- thickness gauging and flaw detection
- ✦ **Radiographic Testing (RT)** -- weld and casting examination
- ✦ **Radiographic Testing Film Interpretation (RTFI)** - Evaluation and interpretation of industrial radiographs.
- ✦ **Magnetic Particle Testing (MT)** -- surface and near-surface flaw detection
- ✦ **Liquid Penetrant Testing (PT)** -- surface-breaking discontinuity detection
- ✦ **Visual Testing (VT)** -- direct and remote visual examination
- ✦ **Phased Array Ultrasonic Testing (PAUT)** -- advanced weld and volumetric examination
- ✦ **Eddy Current Testing (ET)** -- tubing and surface conductivity-based testing
- ✦ **IRIS** -- internal rotary inspection for heat exchanger tubing
- ✦ **RFET** -- remote field testing for ferromagnetic tubing
- ✦ **MFL** -- magnetic flux leakage testing for tank floors and pipelines
- ✦ **Positive Material Identification (PMI)** -- alloy verification
- ✦ **Hardness Testing** -- in-situ hardness surveys

10 WELDING ENGINEERING SERVICES

Welding Engineering Services

Our welding engineering team supports fabrication quality from procedure development through to failure investigation, ensuring welded joints meet design and code intent.

- ✚ Welding Procedure Specification (WPS) development.
- ✚ Procedure Qualification Record (PQR) development and testing coordination.
- ✚ Welder Qualification Testing (WQT) coordination and certification.
- ✚ Welder qualification record management.
- ✚ Welding procedure development for new materials and joint configurations.
- ✚ Failure analysis of welded components.
- ✚ Metallurgical investigation and microstructure evaluation.
- ✚ Mechanical testing coordination (tensile, bend, impact, hardness).
- ✚ Welding engineering consultancy for fabrication and repair projects.

11 PLACEMENT SUPPORT

Career & Placement Services

The RISAL Placement Division

Certification alone does not build a career -- it needs to be connected to the right opportunity. The RISAL Placement Division exists to close that gap, taking candidates from classroom to career through a structured, mentor-led process backed by an active employer network across India, the Middle East, and global offshore markets.

- + Resume Preparation -- ATS Friendly, internationally formatted, certification-forward resumes.**
- + Mock Interviews -- technical and behavioural rehearsal with real feedback.**
- + HR Interview Preparation -- communication, salary negotiation, and offer readiness.**
- + Technical Interview Preparation -- code-based and discipline-specific question drilling.**
- + Job Referral -- direct introductions into our active employer network.**
- + Career Guidance -- long-term pathway planning by discipline and market.**
- + India Placement -- refinery, EPC, and inspection agency opportunities.**
- + Middle East Placement -- GCC-based oil & gas and inspection company opportunities.**
- + Overseas Placement -- offshore and international assignment support.**
- + Employer Network -- direct relationships with inspection, EPC, and operator organisations.**

12 STUDENT BENEFITS

Why Engineers Choose RISAL

- + **Internationally benchmarked curriculum aligned to API, ASNT, AWS, and ISO codes.**
- + **Field-experienced faculty with genuine turnaround and offshore exposure.**
- + **Small batch sizes ensuring individual attention.**
- + **Access to real inspection equipment and practical demonstration sessions.**
- + **Structured placement support built directly into every certification track.**
- + **Free resume building and LinkedIn optimisation for all enrolled students.**
- + **Mock interview access with industry-experienced panels.**
- + **CPD-eligible refresher access for alumni pursuing recertification.**
- + **Flexible batch timing -- weekday, weekend, and fast-track options.**
- + **Lifetime alumni network access for referrals and mentorship.**

13 INDUSTRIES WE SERVE

Industries & Market Segments

Our training, inspection, and engineering teams are experienced across the full spectrum of heavy-process and energy industries.

Sector	Sector
Oil & Gas	Refineries
Petrochemical	Power Generation
Offshore	Onshore
Steel	Cement
Water & Utilities	Infrastructure
Renewable Energy	Manufacturing

14 STANDARDS WE FOLLOW

International Codes & Standards

Every training module, inspection deliverable, and engineering assessment produced by RISAL is mapped against internationally recognised codes and standards, including:

Body	Scope
API	American Petroleum Institute -- inspection, equipment, and RBI standards
ASME	Boiler, Pressure Vessel, and Piping Codes
ASTM	Materials testing and specification standards
AWS	American Welding Society standards
ISO	International quality and management system standards
NACE / AMPP	Corrosion control and materials protection standards
ASNT	Non-destructive testing personnel certification (SNT-TC-1A)
TWI	Welding and NDT training and certification body
CSWIP	Welding and coating inspector certification scheme
BS EN	British and European engineering standards

15 OUR CLIENTS

Trusted By Industry

Organisations That Trust RISAL

RISAL is proud to support the technical training and inspection requirements of leading engineering and industrial organisations, including:

-  **BHEL**
-  **SPIC**
-  **BPCL**
-  **ONGC**
-  **CPCL**

Future Client Categories

As RISAL scales its consultancy and training footprint, we are actively building relationships across the following categories -- presented here as a framework for business development targeting:

-  **National and international Oil & Gas operators.**
-  **EPC contractors executing refinery, petrochemical, and power projects.**
-  **Third-party inspection and certification agencies.**
-  **Asset integrity and engineering consultancies.**
-  **Fabrication yards and equipment manufacturers.**
-  **Power generation and renewable energy developers.**
